GOLDEN
AUTOMATION SYSTEMS

HERMES 2.0

Independent from vessel's
Communication Systems.

Golden Automation Systems developed an innovative Remote Support Platform specifically for the yachting needs. **HERMES 2.0** is the ideal basis for securely connecting your machines and systems to the Internet for direct access or via our remote service portal worldwide.

sms or email

Service Plan

- **We care for your privacy**
Each of our customers has his own account on our public portals, which is technically separated from other customer accounts.
- **We offer User Access Control**
Using role-based access rights, you decide who can access which machine and when.
- **You stay informed**
Individually configurable reports show which user was connected to which device, when and how long.
- **You have full access control**
Only remote accesses authorised by the operator – by authorisation via key switch on the system or via digital signal from the PLC.
- **Your machines are safe**
Our routers are already delivered with individual and unique device passwords.
